To,
Solar Energy of Illinois

To whomsoever it may concern:

I would like to show my appreciation for what your company has done for us in assisting us on going green. You have done a great job on every step from the beginning of receiving the permits, getting our rebates, installation, and having them up and running efficiently as you had explained to me in the beginning. At places, Broadway medical center and my house has already started to save me energy.

I was very afraid in the starting as to am I making a mistake of spending hundreds of thousands of dollars and not really seeing many other people having adopted this method of producing electricity. After completing this project I have many friends asking me what this is all about and interested in doing the same for their place of residence. I personally have seen the difference of going green really means at the end, which is saving a ton of money after 5-7 years when this system is paid off. I hope to see that day, sooner the way comed is charging us for utilizing the electricity they produce instead of being self sufficient.

I would recommend Solar Energy of Illinois to anyone who needs a solar system anytime.

Thank You,

Tushar Mehta R.Ph.
